### MEP Jobs – Online Services

MEP Jobs provides several types of online services to aid employers in locating qualified staff: job postings; resume database; Talent Alert; and site advertising.

**Job postings:** Employers can post detailed job descriptions on MEP Jobs to reach an audience of industry-specific job seekers. Each posting includes a job title, indexed job category, description of position, benefits and compensation, and contact information. Job seekers can apply to postings via the MEP Jobs website, or by contacting employer directly.

**Resume database:** MEP Jobs provides a searchable database of thousands of industry-specific candidates for mechanical, electrical, and plumbing employers. Users can specify keyword, job title or category, years of experience, certifications, and location to locate the exact resumes needed to fill their open positions.

**Talent Alert:** For employers with talent needs but no time. Employers create profiles of the types of resumes they need, including years of experience, job title or category, certifications, and location. Once the profiles are saved, MEP Jobs runs them against all new resumes and emails the matches to the employer every 24 hours.

**Site advertising:** Employers can reach the entire MEP Jobs audience via banners, tile ads, and other types of site advertising. Ads can be located in specific parts of the site to target either job seekers or employers, or can be tied to particular site activities, such as job searches. Employers can also reach any segment of the MEP Jobs jobseeker audience via customized emails.

### About MEP Jobs:

MEP Jobs is the leading online job board and resume bank for professionals in the mechanical, electrical, and plumbing industries. MEP Jobs focuses exclusively on the specialty trade contractor segment, including contractors, manufacturers, wholesalers, facility managers, service organizations, and executive search firms. MEP Jobs was founded in 1996, and is a service of Industry People Group.
